

Governance

1: Top-down / Bottom up is false opposition

- People do not always care
- Lack of vision, both TD and BU
- Lack of money, always an excuse not to finance
- Politicians lack vision
- Bottom-up cannot set programmes, but makes for important experimentation!

2: Education is important

- Not ready-made knowledge
- But problematizing
- Experimentation
- Currently imbalance in knowledge between 'top' and 'bottom'
- Must not be paternalistic, but make people see problem as theirs

3: Structures need revision

- Explicate subsidies
- Oil & gas companies are tightly linked to politicians, it is not their mission to care for this!
- Explicate lobbies and transform them for 'sustainable' programme
- Free market is non-existent in many senses
